

Use Case Report:

Analysis of an Intercultural and Diverse Team

Task detail description

Objective

Select a **real or fictional intercultural and heterogeneous team** and conduct a structured analysis using the models, theories, and frameworks discussed during the course. The **goal** is to evaluate how team composition, communication patterns, leadership approaches, and cultural diversity influence team performance and collaboration.

The detailed points are for completeness → you may pick what is suitable for your case.

Step 1: Define the Team

Provide a detailed description of the team you have selected.

Team Composition

- Who are the members of the team?
- What are their professional backgrounds, expertise, and responsibilities?
- What cultural, educational, personalities, or demographic (etc.) diversity exists within the team?

Team Context

- Where are the team members located?
- Is the team co-located, hybrid, or fully remote?
- How do geographical distance and time zones affect collaboration?

Team Purpose

- What is the team's primary objective?
- What project, product, service, or business goal are they working toward?
- What are the key performance expectations and deliverables?

Step 2: Analyse the Team Dynamics

Apply relevant organizational behaviour, intercultural management, and team-development frameworks to examine the following dimensions.

1. Team Formation and Development

- How was the team formed?
- Analyse the team's stage of development using models such as **Tuckman's Forming–Storming–Norming–Performing–Adjourning model**.
- What factors contribute to the team's effectiveness or challenges during each stage?

2. Team Roles and Responsibilities

- What formal and informal roles exist within the team?
- Are responsibilities clearly defined?
- Apply relevant theories such as **Belbin's Team Roles** to assess role diversity and team balance.

3. Communication Styles and Cultural Differences

- How do team members communicate and exchange information?
- What cultural dimensions influence communication behaviours?
- Analyse potential differences using frameworks such as **Hofstede's Cultural Dimensions**, **Hall's High- and Low-Context Communication**, or other relevant intercultural models.
- What impact do personality traits and communication preferences have on team interactions?

4. Leadership Style

- What leadership approach is demonstrated within the team?
- Is leadership centralized or distributed?
- Evaluate the effectiveness of the leadership style using relevant leadership theories (e.g., Transformational, Directive, Cooperative, etc.. Leadership).

5. Conflict Analysis and Conflict Management

- What types of conflict may arise (task, relationship, process, or cultural conflicts)?
- Styles: Avoiding, compromising, etc...
- What misunderstandings can occur because of cultural or communication differences?
- How are conflicts addressed and resolved?
- How are authority, decision-making, and accountability managed?

6. Collaboration Methods and Digital Tools (optional)

- Which collaboration tools, technologies, and communication platforms are used?
- How do these tools support knowledge sharing, coordination, and team cohesion?
- What processes or practices help bridge cultural, geographical, or functional gaps?

Step 3: Critical Evaluation and Recommendations

Based on your analysis:

- Identify the team's key strengths.
- Highlight major challenges and risks.
- Evaluate how diversity contributes to innovation and performance.
- Provide evidence-based recommendations for improving communication, leadership, collaboration, and overall team effectiveness.

Expected Outcome

The report should present a **comprehensive, theory-based analysis** that demonstrates the ability to connect practical team dynamics with established organizational behaviour and intercultural management frameworks. Conclusions and recommendations should be supported by relevant models, concepts, and course materials.
